# Montana Gains California's Seat <br> With New 2019 Census Estimates; But Alabama \& Ohio to also lose by 2020 

New Census Bureau population estimates for 2019 released today shows a change of one more seat between two states from last year's study generated by Election Data Services, Inc. on which states would gain or lose congressional seats if the current estimate numbers were used for apportionment in 2019. But projecting these numbers to 2020 , using several different methods, leads to more states being impacted by the decennial census scheduled to take place in just four months. These numbers could also be majorly impacted by how well the Commerce Department and Census Bureau conducts the census, how well the American public responds to this decennial exercise, the first where major components will be conducted via the internet, and whether the discussion on citizenship over the past year will cause some groups to avoid participating. A changed practice on how to count the military overseas could also change the final apportionment when it is announced December 31, 2020.

The Bureau's 2019 total population estimates show that now 15 states will be impacted by changes in their congressional delegation if these new numbers were used for apportionment today. The state of Montana joins the previously indicated states of Arizona, Colorado, Florida, North Carolina, and Oregon to each gain a single seat while the state of Texas is now shown to gain a second seat with the new data. The state of California joins the states of Illinois, Michigan, Minnesota, New York, Pennsylvania, Rhode Island, and West Virginia to lose a seat in Congress using the new data. A map of the 2019 numbers is attached.

The new numbers, however, reflect subtle changes taking place across the nation in birth and death rates and resulting total population numbers that become magnified when the information is projected forward to coincide with the taking of the Census on April 1, 2020. Election Data Services created a variety of different methodologies to project the 2019 data forward nine months (from the July1, 2019 date of the Census estimates) to April 1, 2020 (several short-term projection methods for the trend occurring in 2018-2019, and 2017-2019, a middle term
methodology using the 2015-2019 trend, and a long-term projection for 2011-2019). The different methodologies benefit some states and disadvantage others in the "musical-chairs" effort of allocating 435 seats to the 50 states. All the methods would add a second seat for Florida and a third seat for Texas, to the list of states noted above that will gain one or more seats by 2020. The list of losing states will expand to also include Alabama and Ohio, by the time the Census is taken in 2020. A map showing the 2020 projected apportionment using the 2018-2019 trend is attached. Because all the projection models produce the same state overall results in seats as the 2018-2019 trend map, only the tables of the calculations for the different projection models are attached so that how close states are to changes can be observed.

The new 2019 data and all projections forward to 2020 now confirms that California will lose a congressional district in 2020. Our 2018 study first picked up the possibility that California could lose a congressional district for the first time in their nearly 160 -year history. The new 2019 numbers from the Bureau indicate the state would lose that seat by 98,709 people but projecting the data forward to 2020 shows the state further away from potentially keeping that seat, losing it by over 300,000 people in 2020.

While the 2019 Census estimate numbers show Alabama keeping their seventh seat by a slim margin of just 18,516 people, projecting the data forward to 2020 would find the state losing the seventh seat by only 10,072 to 19,074 people, depending on the projection model utilized. All of the projection models find Alabama just missing the last seat to be apportioned, coming in at seat \#436 when there are only 435 seats to hand out (a cut-off mark established in 1910).

The state of Montana is just barely able to reverse previous decades of population shifts when it went from two seats down to one in 1990. For 2020 the state is projected to go back to having two seats, but that gain of a second seat is because the state occupies the dubious distinction of obtaining seat \#435, the last one to be apportioned. Election Data Services calculations show Montana getting that additional seat by only between 2,402 and 4,163 people to spare; a very close margin.

Rhode Island is also a state with an extremely close margin. For most of the decade our studies have projected that Rhode Island would lose their second seat by the end of the decade and the new numbers confirm that projection. But their margin has gotten tighter with the new data. For the past several years we saw that Rhode Island would lose that second seat by more than 25,000 people. But this new data shows the state missing the seat by only 14,539 residents.

Previous Election Data Services studies have hinted that the states of Illinois and New York might be in a position to each lose a second seat by 2020. However, these new Census numbers seem to indicate this will not be the case, with both states just losing a single seat each.

The state of Minnesota is also close to the margin of likely losing a seat in Congress. All of the projections place the state at position \#437, having lost their last seat (their $8^{\text {th }}$ ) by between 6,740 people (the 2019 estimate) to around 21,000 people. Minnesota's state demographer has indicated that recent influx of people to the state has boosted their numbers and it is likely to have had an impact on reapportionment.

```
Election Data Services, "2019 Reapportionment Analysis"
December 30, 2019
Page 3 of 6
```

Using any methodology, the population projections points toward a ten (10) seat change over 17 states across the nation by year 2020. States that will gain single seats include Arizona, Colorado, Montana, North Carolina, and Oregon, while Florida is set to gain two congressional districts and Texas would gain three seats. Single seat losses will again occur in the Midwest and Northeast sections of the nation, where Alabama, California, Illinois, Michigan, Minnesota, New York, Ohio, Pennsylvania, Rhode Island and West Virginia would each lose a seat. All other states would keep the same number of representatives they were awarded in December 2010 when the official 2010 Census numbers were released.

In table form, the gainers and losers are:

## States Gaining Districts (7)

Arizona +1 (from 9 to 10 )
Colorado +1 (from 7 to 8)
Florida +2 (from 27 to 29)
Montana +1 (from At-large to 2)
North Carolina +1 (from 13 to 14)
Oregon +1 (from 5 to 6 )
Texas +3 (from 36 to 39)

## States Losing Districts (10)

```
Alabama -1 (from 7 to 6)
California - (from 53 to 52)
Illinois - (from 18 to 17)
Michigan - (from 14 to 13)
Minnesota-1 (from 8 to 7)
New York -1 (from 27 to 26)
Ohio -1 (from 16 to 15)
Pennsylvania - 1 (from 18 to 17)
Rhode Island -1 (from 2 to 1)
West Virginia -1 (from 3 to 2)
```

With only four months until Census Day, many states have appropriated funds to help send a message to their constituents about the importance of participating in the Census ${ }^{i}$. Many of these states are on the edge of gaining or losing a seat in the apportionment process, but there are some notable exceptions. For example, Texas has not appropriated any funds for Complete Count efforts, and yet whether they stand to gain only two or maybe three additional seats may depend on how good the counting is conducted in the state. This could also be impacted by the reaction to the citizenship issue that has become more of a focus in the past year. Florida has also failed to appropriate any funds for Complete Count efforts in 2020, but they are more firm in the projection of receiving two additional seats in 2020. Thus, the two largest gaining states in number of seats are those that didn't spend their own money to help the counting process.

Since 1941, by law the number of seats in the U.S. House of Representatives has been capped at 435. As a result, there has always been interest in finding which states are close to that magic bubble, either just gaining their last seat, or just missing their next seat. The following table shows the results of the 2019 population estimates, as well as one of the short-term trend methodology calculations (2018-2019) for the seats within five positions of the 435 cut off.

| 2019 Reapportionment Analysis |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 2019 Population Estimates |  |  | 2020 Projections (using 2018-2019 short-term trend) |  |  |
| Last | Five Seats | Margin of Gain |  | Five Seats | Margin of Gain |
| 431 | Arizona (10th) | 128,294 | 431 | Illinois ( $\left.17^{\text {th }}\right)$ ) | 126,052 |
| 432 | New York (26th) | 237,376 | 432 | New York ( $26{ }^{\text {th }}$ ) | 61,279 |
| 433 | Alabama(7th) | 18,516 | 433 | Texas ( $39^{\text {th }}$ ) | 79,742 |
| 434 | Montana ( $2^{\text {nd }}$ ) | 2,856 | 434 | Montana ( $2^{\text {nd }}$ ) | 2,402 |
| 435 | Ohio ( $16^{\text {th }}$ ) | 12,508 | 435 | Florida (29th) | 44,285 |

| 438 | Texas $(39$ th $)$ | 51,004 | 438 | Ohio (16th) | 74,135 |
| 439 | California $\left(53^{\text {rd }}\right)$ | 98,709 | 439 | California (53rd) | 344,367 |
| 440 | Rhode Island $\left(2^{\text {nd }}\right)$ | 7,703 | 440 | Rhode Island $\left(2^{\text {nd }}\right)$ | 14,539 |

The Census Bureau's yearly release of population estimates also results in a revision of previous year estimates. While Election Data Services has traditionally reflected those revisions in our projection methodology, we have created a new apportionment table that shows the apportionment results for each year in the decade based upon those revised numbers. The table, entitled "2020 Apportionment Calculations based on different trend lines coming from the 2019 Census Bureau Estimates" is attached to this press release. The table shows consistent gains and losses of seats over the entire decade with the new data. The table also includes a chart of where seats \# 430 through \# 440 would be assigned to states in each projection.

Kimball Brace, President of Election Data Services, Inc. cautioned users that even though there is a very short time before the Census, the population projections are still subject to change. "We are now at a place where the rubber meets the road. How well does the Census Bureau and the Trump administration put on the greatest mobilization of government resources outside of war time? How well will the public respond and answer the Census, given the competing focuses of everyday life and the need to utilize the internet? Will the fear of foreign intervention also impact the census?" Brace noted. "Having worked with Census data and estimates since the 1970s, it is important to remember that major events like Katrina and the 2008 recession each changed population growth patterns and that impacted and changed the next apportionment," he said.

Election Data Services, Inc. "2019 Reapportionment Analysis"
December 30, 2019
Page 5 of 6
Brace also noted that major changes in the counting process are in the works for 2020 and that reduced budget funding could impact those plans. "History can also be a guide, recalling that the 1920 apportionment was cancelled because the numbers showed for the first time that more people resided in urban areas than rural areas" said Brace. "I have had my share of nightmares that a failed Census process could lead to unreliable numbers and a repeat of 1920. ."

Because congressional apportionment also impacts the Electoral College and the vote for President, Election Data Services took the 2020 projections for each state and applied the Presidential election results from the past five Presidential contests to determine the Electoral College outcomes in the past 16 years. The study shows that none of the presidential contests would have elected a different presidential candidate using the new apportionment counts but they would have been more Republican in nature. For example, in 2016 President Trump would have gained two additional electoral college votes under the new apportionment projections. In 2012 President Obama would still have won the Electoral College, but with four less votes ( 328 vs 332) than he won at the time of the voting. The biggest change would have occurred in the 2000 presidential election where George Bush would have gained an additional 20 electoral votes had the new 2020 apportionment projections determined the number of congressional seats in each state.

The 2016 Electoral College was muddled because 7 electors voted for a different candidate than what they had pledged based on the vote totals. As a result, the overall change in candidate votes based on the new apportionment numbers shows just two vote difference in the bottom line results. President elect Trump's ability to carry states that will be losing congressional seats in 2020 also contributed to a reversal of the pattern depicted in previous elections.

It should be noted that the 2020 Presidential election and resulting Electoral College will occur before the results of the 2020 Census are released by December 31, 2020. Therefore, the Electoral College results in 2020 will be governed by the state's apportionment allocation as they exist today, having been first determined in 2011. The first time the new 2020 apportionment results will be utilized will be the 2024 Presidential election. Election Data Services, Inc. has also worked with the website 270 ToWin , who has built an interactive map of the these new apportionment results where users can adjust state outcomes to discover Electoral College outcomes for the presidential elections back to 2000.

Major weather events have also affected apportionment. The Census Bureau's estimated populations released for 2005 showed Louisiana would keep all their congressional districts that decade. Even the Bureau's own projections for 2010 released that same year showed Louisiana staying the same. Then hurricane Katrina hit Louisiana at the end of August 2005 (after the date of the population estimates). Devastation and population loss impacted New Orleans in a major way, and when the Bureau's 2006 population estimates were released Louisiana was looking at losing a congressional seat. That was ultimately confirmed when the 2010 Census was taken, and state data was released at the end of that year.

As Election Data Services, Inc. noted last year in the 2017 study, the year of 2017 saw 18 hurricanes and tropical storms, three of which had a potential of impact on population movements in the United States. Two of these storms: Irma (impacting Miami and the Florida Gulf Coast), and Maria (which devastated Puerto Rico)) affected Florida and the new population estimates reflect that fact. Last years study showed Florida was 366,735 people away from gaining a third seat.

Election Data Services, Inc. "2019 Reapportionment Analysis"
December 30, 2019
Page 6 of 6
The 2019 data shows the state is only 172,169 people away from a third additional seat, an improvement of nearly 200,000 people.

The 2019 population estimates have not been statistically adjusted for any known undercount that may take place when the Census is conducted. In addition, no estimates were provided for U.S. military personnel overseas. This component has in the past been counted by the Census Bureau and allocated to the states based on administrative records retained by the military. Overseas military personnel have been a factor in the apportionment formula for the past several decades, including the switching of the final district in 2000 that went from Utah to North Carolina.

For 2020 the Census Bureau has changed the "residency rules" for counting the military by creating a distinction between personnel who are deployed overseas (usually for short periods of time) compared to those who are stationed or assigned overseas (frequently for longer periods of time). The Bureau will use DOD's administrative records to count deployed personnel at their usual residence in the US for both apportionment and redistricting purposes (they will be embedded within the state's resident population counts). On the other hand, personnel who are stationed or assigned overseas will be counted to their "home state of record" for apportionment purposes only and will show up as part of a state's total "overseas count" when the Bureau releases the final and official apportionment data by December, 31, 2020. Military sources have told the Census Bureau that of all overseas military, approximately $15 \%$ are deployed personnel and $85 \%$ are stationed or assigned overseas.

Past apportionment studies by Election Data Services, Inc. can be found at https://www.elec-tiondataservices.com/reapportionment-studies/. A historical chart on the number of districts each state received each decade from 1789 to current is also available at this web address and linkable at https://www.electiondataservices.com/wp-content/uploads/2014/10/CD-apportionment-17892010.pdf.

Election Data Services Inc. is a political consulting firm that specializes in redistricting, election administration, and the analysis of census and political data. Election Data Services, Inc. conducts the congressional apportionment analyses with each annual release of the census population estimates. For more information about the reapportionment analysis, contact Kimball Brace (703-580-7267 or 202-789-2004 or kbrace@electiondataservices.com).
